

Some of the LNF expectations for Y6 include:

Using Number Skills

- ⇒ Read and write numbers to 1 million and numbers to 3 decimal places
- ⇒ Use mental strategies to recall multiplication tables up to 10×10 and use to solve division problems
- ⇒ Use understanding of simple fraction, decimal and percentage equivalences
- ⇒ Calculate percentage quantities based on 10%
- ⇒ Add and subtract numbers using whole numbers and decimals
- ⇒ Multiply 2 and 3 digit numbers by a 2 digit number
- ⇒ Divide 3 digit numbers by a 2 digit number
- ⇒ Estimate by rounding to the nearest 10, 100, 1000 or whole number
- ⇒ Make comparisons between prices and understand which is best value for money

Using Measuring Skills

- ⇒ Read and interpret scales or divisions on a range of measuring instruments
- ⇒ Time events in minutes and seconds to the nearest tenth of a second
- ⇒ Use and interpret timetables and schedules
- ⇒ Estimate how long a journey takes
- ⇒ Measure and record temperatures including positive and negative readings and calculate temperature differences

Using Data Skills

- ⇒ Extract and interpret information from diagrams, timetables and charts
- ⇒ Represent data using lists, tally charts, diagrams, bar charts, line graphs etc.

Developing Numerical Reasoning

- ⇒ Transfer mathematical skills to a variety of contexts and everyday situations
- ⇒ Select appropriate mathematics and techniques to use
- ⇒ Select and use suitable instruments and units of measurement
- ⇒ Explain results and procedures clearly using mathematical language

Supporting children in Year 6

A booklet for parents
Help your child with numeracy

Remainders

Draw a 6 x 6 grid like this.

82	33	60	11	73	22
65	12	74	28	93	51
37	94	57	13	66	38
19	67	76	41	75	85
86	29	68	58	20	46
50	69	30	78	59	10

Choose the 7, 8 or 9 times table.

Take turns.

Roll a dice.

Choose a number on the board, e.g. 59. Divide it by the tables number, e.g. 7. If the remainder for $59 \div 7$ is the same as the dice number, you can cover the board number with a counter or coin.

The first to get four of their counters in a straight line wins!

Doubles and trebles

Roll two dice.

Multiply the two numbers to get your score.

Roll one of the dice again. If it is an even number, double your score. If it is an odd number, treble your score.

Keep a running total of your score.

The first to get over 301 wins.

Favourite food

Ask your child the cost of a favourite item of food.

Ask them to work out what 7 of them would cost, or 8, or 9.

How much change would there be from £50?

Repeat with his / her least favourite food.

What is the difference in cost between the two?

Recipes

Find a recipe for 4 people and rewrite it for 8 people, e.g.

4 people	8 people
125g flour	250g flour
50g butter	100g butter
75g sugar	150g sugar
30ml treacle	60ml treacle
1 teaspoon ginger	2 teaspoons ginger

Can you rewrite it for 3 people? Or 5 people?

Three in a row

For this game you need a calculator.

Draw a line like this:

Take it in turns to choose a fraction, say $\frac{2}{5}$.

Use the calculator to convert it to a decimal (i.e. $\frac{2}{5} = 0.4$) and mark your initials at this point on the line.

The aim of the game is to get 3 crosses in a row without any of the other player's marks in between.

Some fractions are harder to place than others, e.g. ninths.

Fours

Use exactly four 4s each time.

You can add, subtract, multiply or divide them.

Can you make each number from 1 to 100?

Here are some ways of making the first two numbers.

$$1 = (4 + 4) / (4 + 4)$$

$$2 = 4/4 + 4/4$$

TV addicts

Ask your child to keep a record of how long he / she watches TV each day for a week. Then ask him / her to do this.

Work out the total watching time for the week.

Work out the average watching time for a day
(that is, the total time divided by 7).

Instead of watching TV, you could ask them to keep a record of time spent eating meals, or playing outdoors, or anything else they do each day. Then work out the daily average.

Sale of the century

When you go shopping, or see a shop with a sale on, ask your child to work out what some items would cost with:

50% off, 25% off, 10% off, 5% off

Ask your child to explain how s/he worked it out.

A million pounds

Assume you have £1 000 000 to spend or give away.

Plan with your child what to do with it, down to the last penny
